

## Case Study

# ARUP

**Client** : EIC Ltd/ARUP Associates  
**Scope** : LAN Infrastructure

### General/Brief

To implement and maintain the complete LAN infrastructure within the Arup Campus. The Network consists of a 10gb backbone with a Category 6 Molex system providing the final connection to the user.

All cabling is routed via an under floor tray system and terminating into floor boxes. The system is designed to be flexible allowing for the easy relocation of the users.

ARUP are a global firm of designers, engineers, planners and business consultants providing a diverse range of professional services to clients around the world.

They installed almost 9000 staff working in 86 offices in more than 37 countries. At any one time, we have over 10,000 projects running concurrently.

### Conclusion

This was a very successful project, delivered on time and within budget, meeting and exceeding the client's expectations.
