

Case Study

Client : Affiniti/British Airways
Scope : LAN and WAN Infrastructure

General/Brief

We were tasked to implement and maintain the complete British Airways local area network (LAN) and wide area network (WAN) infrastructure at London Heathrow Airport, London Gatwick Airport, and other regional airports where the airline operates.

British Airways works within a multitude of buildings including terminals, offices, data centres, hangars and workshops.

Working in these environments means most of the work is undertaken out of normal working hours.

CDI operates a full 24 x 7 response call out support service.

Conclusion

This was a very successful project, delivered on time and within budget, meeting and exceeding the client's expectations.
