

## Case Study

**Client** : Matthew Boulton College/Interserve Engineering  
**Scope** : LAN infrastructure

### General/Brief

To implement and maintain the complete LAN infrastructure within the new College Building. The Network consists of a Diverse routed 10gb Fibre Backbone and multi core voice links to the communication rooms on each of the nine floors, with a Category 6 system providing the final link to the desk.

The College is located in the Eastside regeneration area of Birmingham. It currently teaches 500 courses to over 7,000 students. With this in mind the System was designed to support the Data and VoIP networks.

### Customer Comment

**Glen Lambah, IT Systems & Communications Manager, Matthew Boulton College**

“This has been an exciting and successful installation in a building that not only looks good, but also provides exciting opportunities for a new generation of students.”
