

Case Study

Client : Jewson/Saint-Gobain
Scope : LAN and WAN infrastructure

General/Brief

Jewson is part of Saint-Gobain Building Distribution Group, Europe's number one building materials distributor. Saint-Gobain Building Distribution UK consists of over 40 subsidiary businesses, including Jewson, spread over approximately 900 sites and employing around 18,500 people. It has total annual sales of over £2.5 billion.

We were awarded a contract by Jewson that tasked us with completing an audit of cabling networks within existing branches, as well as moving existing installations, installing new cabling and repairing faults. We were also charged with the installation of systems within new branches. This meant setting up and configuring network devices including PCs, printers, switches and tills.

In addition to working within the branch environment, we were also responsible for maintaining the network within the Saint-Gobain Pipeline Division offices, as well as Jewson's headquarters and regional offices.

Conclusion

This was a very successful project, delivered on time and within budget, meeting and exceeding the client's expectations.

Client Comment

Jim Greaves, Senior network analyst, Saint-Gobain Building Distribution IT

"CDI came recommended to Jewson as a quality provider with competitive pricing, so we had high expectations. I can honestly say our expectations were more than met."
