

Case Study

TOYOTA

Client : Toyota Manufacturing UK
Scope : LAN and WAN infrastructure

General/Brief

To implement and maintain the complete LAN and WAN infrastructure site wide.

The network consists of a Fibre Backbone linking all 73 cabinets site wide. With a combination of Nexans Lanmark and Molex shielded Category 5e cable infrastructure.

We have a site office at the Burnaston Site complete with stores in order for us to offer a 24 hour response time.

Most work is carried out at weekends for minimal disturbance. CDI have 10 years of site experience and knowledge of the entire existing network.

Conclusion

This was a very successful project, delivered on time and within budget, meeting and exceeding the client's expectations.
